Capita by Country/Region and Continent

Insights:

- Europe is prominently shaded in blue, indicating high GDP per capita across its countries.
- Asia is marked in red, showing a wide distribution of GDP values, likely influenced by large economies like China, Japan, and India.
- Africa is shaded in orange, reflecting lower GDP per capita overall, consistent with developing economic conditions.
- North America (pink) shows strong GDP per capita, especially in the United States and Canada.
- South America (purple) displays moderate GDP per capita, with some variation across countries.
- Oceania (yellow) is represented by a few regions, likely dominated by Australia's high GDP per capita.
- (Blank) regions in gray may represent missing or unclassified data, contributing minimally to the visualization.

Observations:

- The map uses geographic boundaries and color-coded shading to represent

GDP per capita distribution across continents.

- The legend clearly distinguishes each continent with its corresponding color.
- The visualization highlights economic disparities and regional strengths, with Europe and North America leading in GDP per capita.
- Africa and (Blank) regions show the lowest economic indicators, suggesting areas for development or data gaps.
